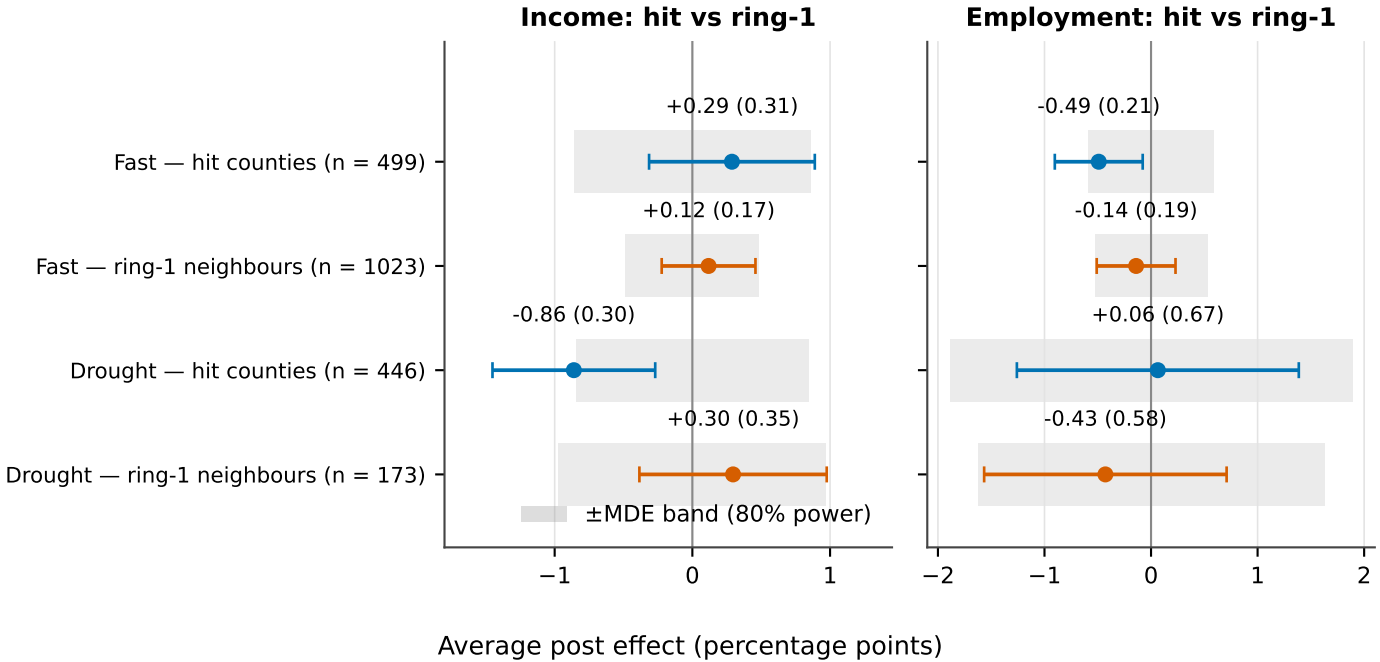
Figure 5. Spillover rings: hit counties versus adjacent (ring-1) counties



Notes: Stacked ring design; ring-1 median centroid distance 44.1 km (IQR 35–60 km). Fast ring-1 income: +0.12 (0.17) pp, MDE 0.49 pp — no detectable spillover at annual frequency; the drought ring (173 ring-1 units) is underpowered (employment MDE 1.63 pp).
