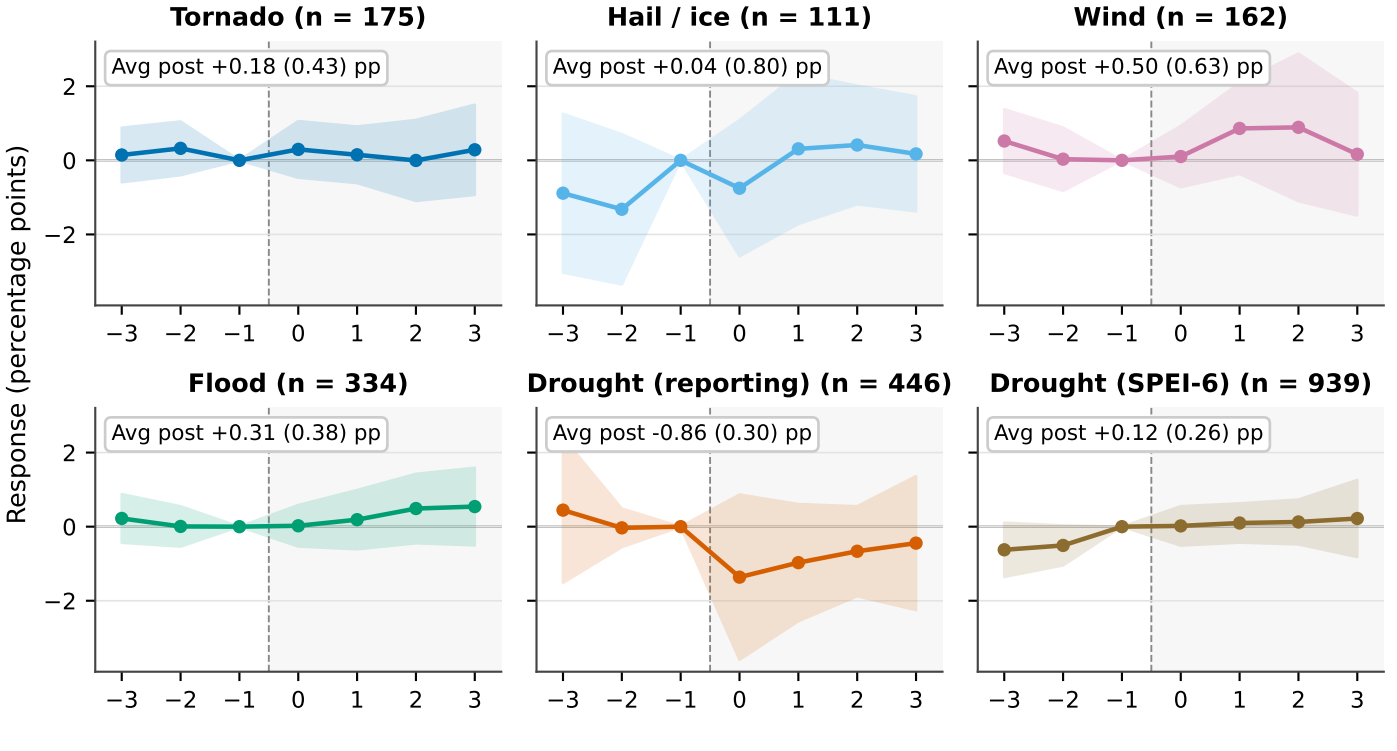
Figure 2. Income event-study paths by peril



Notes: Stacked event studies (scaled + exclusive cohorts; stack×state×year effects; state-clustered SEs).
Shading: 95% confidence intervals. One estimate passes the Benjamini–Hochberg leg of the decision rule (smallest q = 0.065); none satisfies the full rule.
Source: Author's estimates, results/paths_primary.csv and results/paths_spei.csv (SPEI-6 panel); averages from results/table2_primary_per_peril.csv and results/table6_spei_drought.csv.
