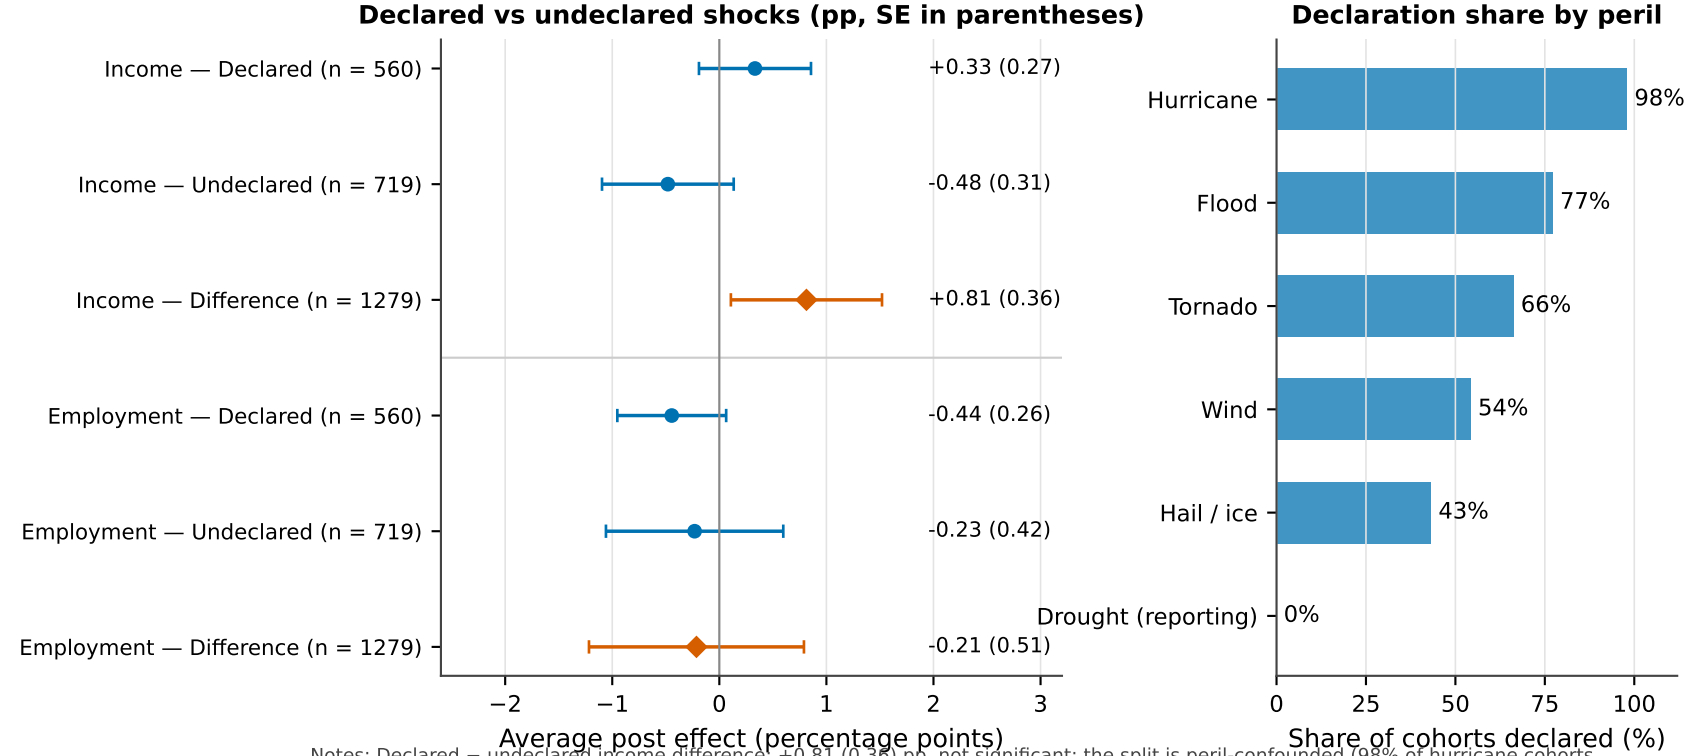
Figure 6. Declaration split: declared versus undeclared shocks



Notes: Declared − undeclared income difference: +0.81 (0.36) pp, not significant; the split is peril-confounded (98% of hurricane cohorts declared, 0% of drought cohorts), so it does not isolate aid. Source: Author's estimates, results/table5_fema_split.csv; declaration shares, results/fema_share_by_peril.csv (OpenFEMA DisasterDeclarationsSummaries).
